Subject: TES - updated design for pilot study

Dear all,

On Friday we selected COVANCE as the CRO for the pilot exposure study. Since the design of the study had changed to some degree as a result of our ongoing learning and discussions both internally and externally, we have sent COVANCE yesterday an updated design as the basis for their start to put together a detailed study plan and budget. This updated design is attached and posted on the WSA Shared Folder for your reference. If you have comments or suggestions on the design of the pilot study, please contact me.
